

Problem solving

Problem-solving methodologies

Depending on the **nature and complexity of the problem** we are trying to solve, we can apply a problem-solving methodology to bring **structure and repeatability to our approach**.

- Logic trees

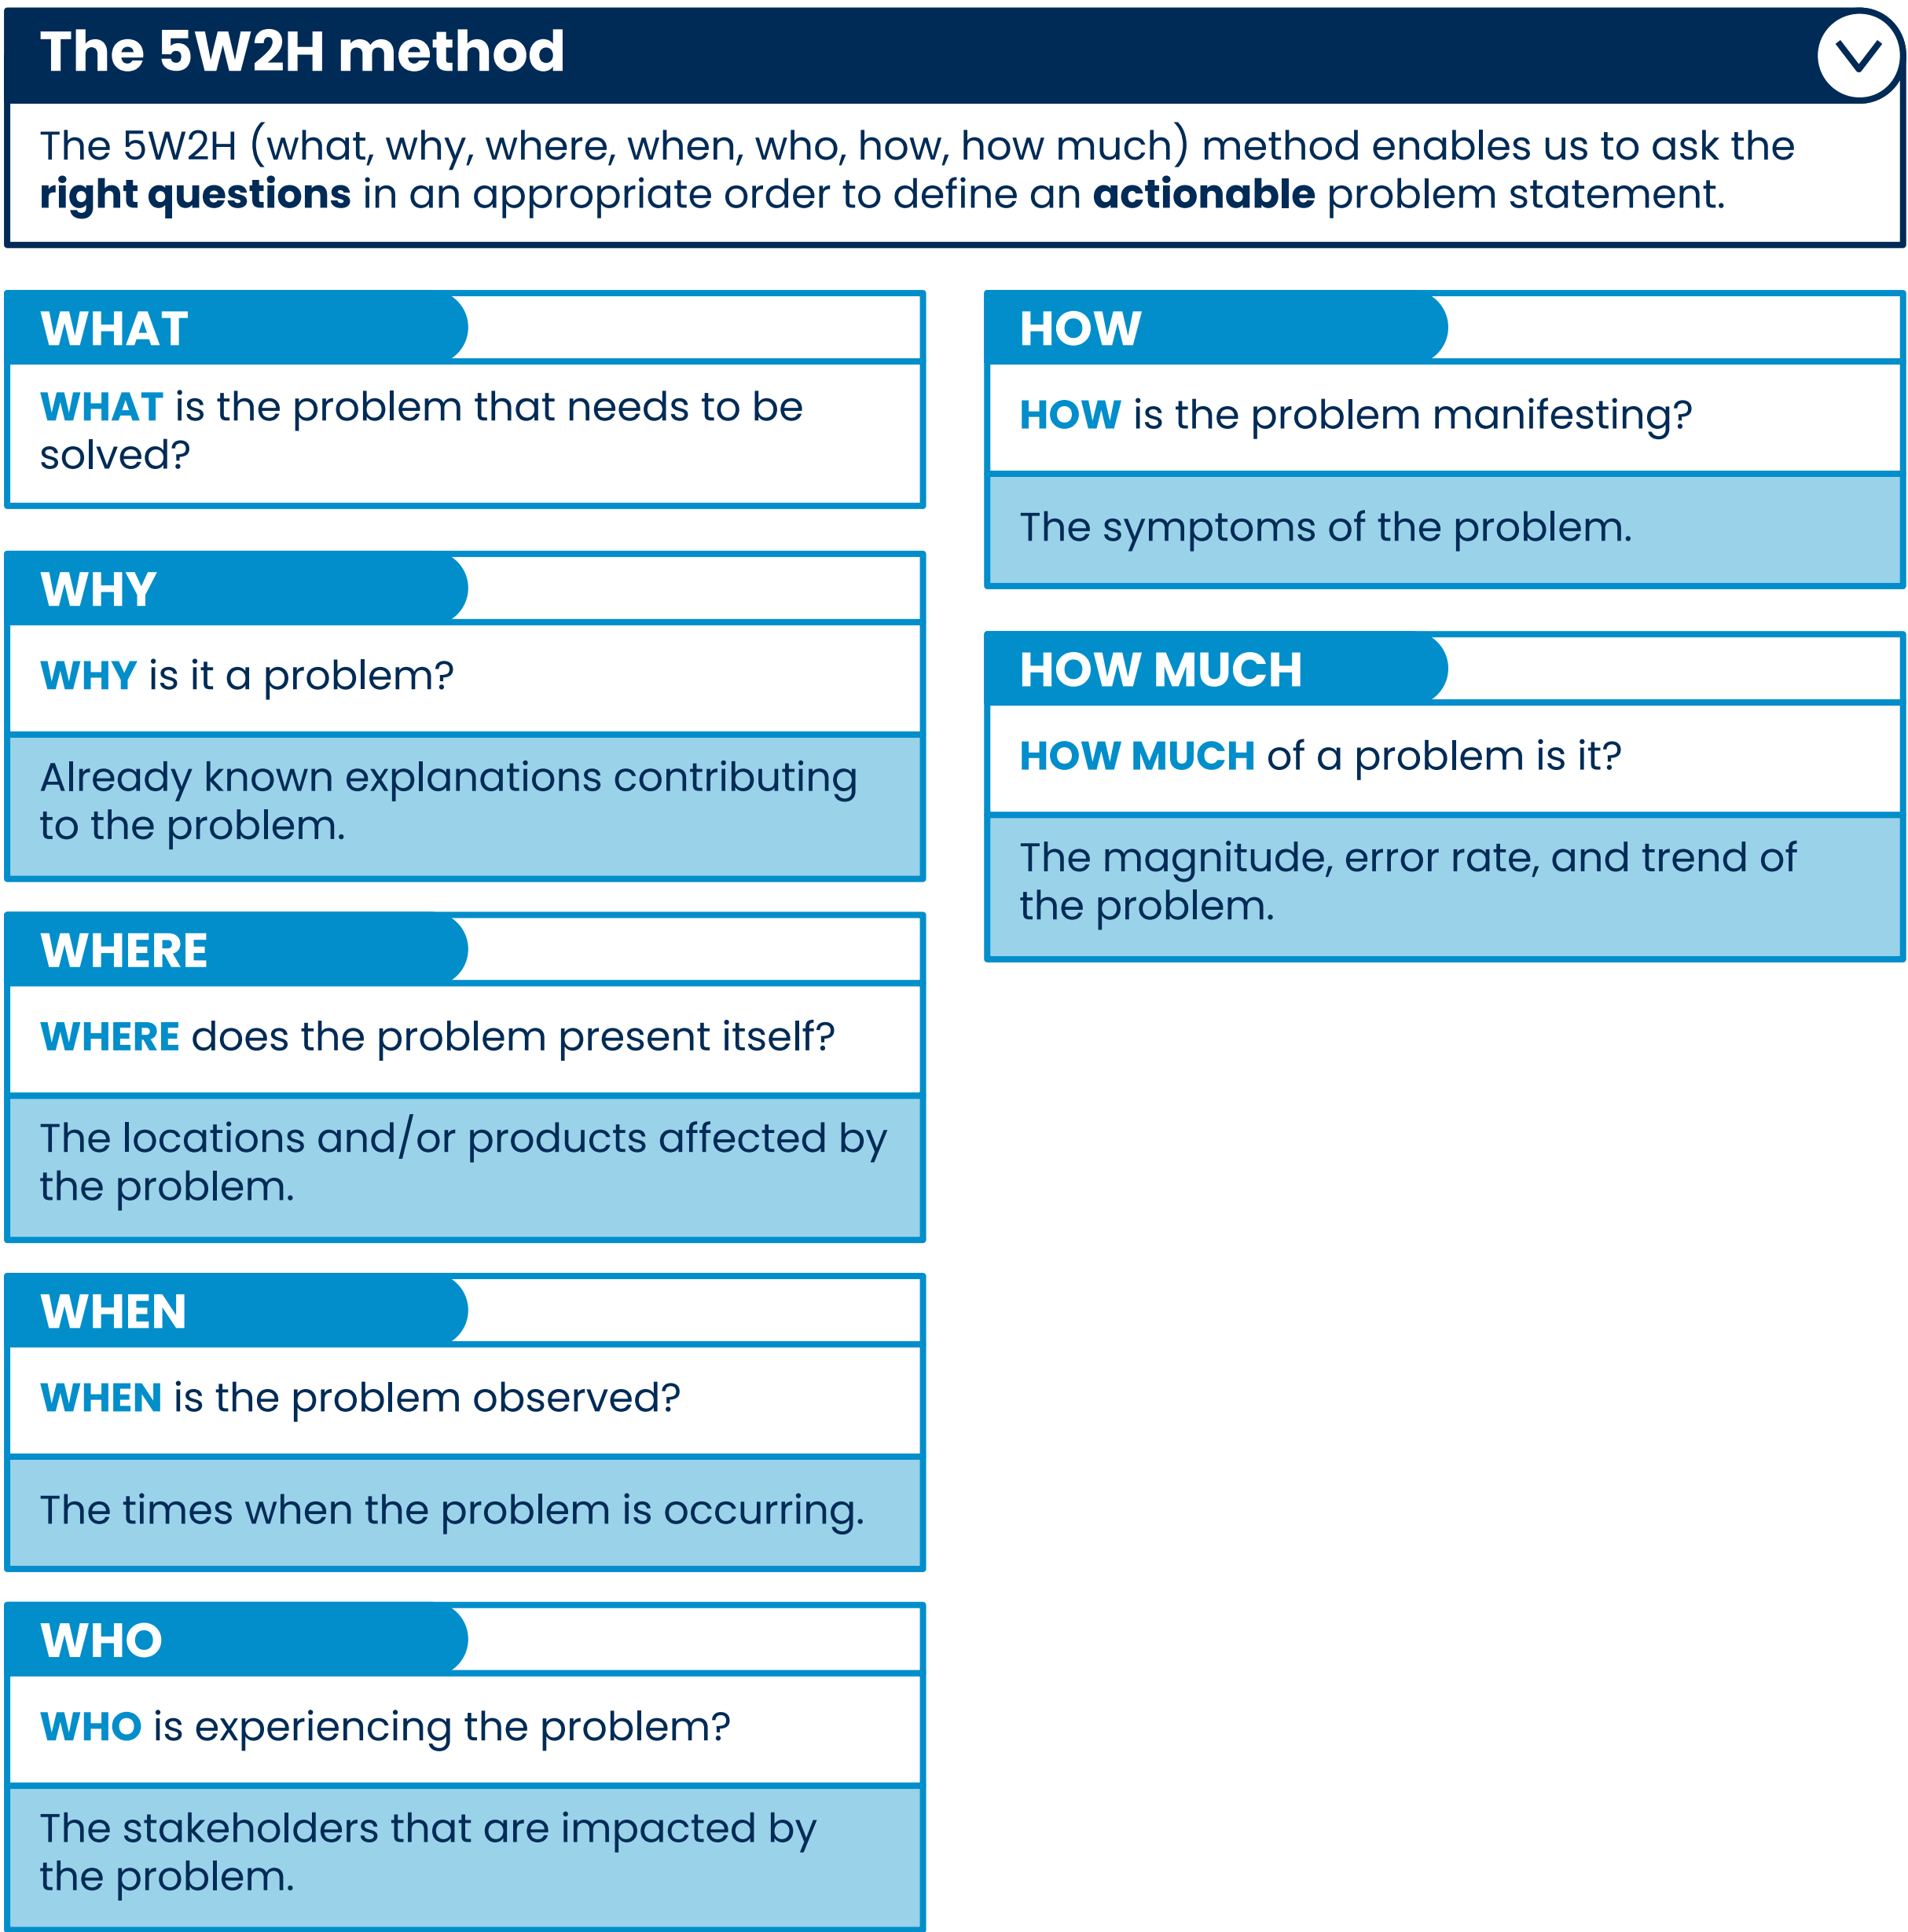

A fundamental **problem-structuring framework** for solving complicated problems.
- Agile

A framework to effectively **manage projects**. Mostly used by developers, but can be applied to almost anything.
- Design thinking

A solution-based approach to **solve complex, ill-defined** problems.
- Scientific method

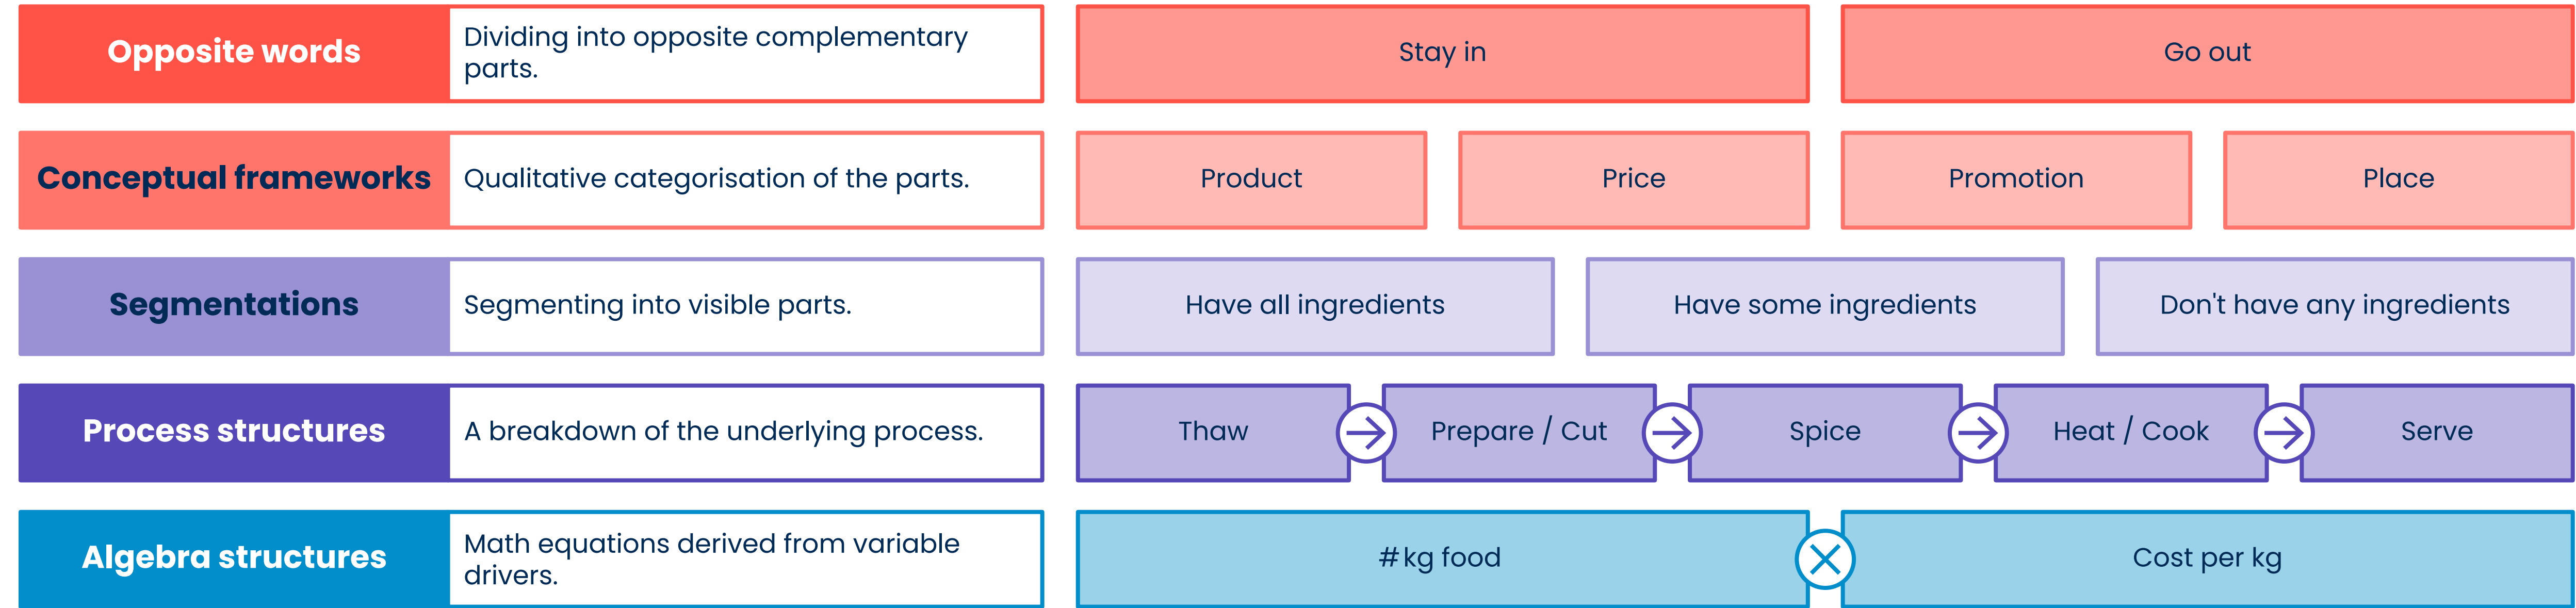

A logical problem-solving approach that is **rigorous and replicable** – used by scientists.
- Root cause analysis

A problem-solving method used to **identify the root causes** of problems.

MECE

MECE, or **mutually exclusive collectively exhaustive**, is a grouping principle that helps us solve problems coherently and comprehensively. It ensures that **all possible answers are considered exactly once**.

Design thinking

Design thinking is an **iterative** process to **redefine problems**, **challenge assumptions** (about the problem), and **create innovative solutions**.
