

Setting up for success

In this markdown, we'll go over some essential tools and programs that should be installed for our Python module.

1. Installing Anaconda

In these walk-throughs, we install Anaconda to enable us to use and manage Python.

- Installing Anaconda on Mac [Walk-through]: <https://player.vimeo.com/video/865902951?h=2663775a23>
- Installing Anaconda on Windows [Walk-through]: <https://player.vimeo.com/video/865858076?h=57fe0ddb92>

2. Environments in Anaconda

In this walk-through, we take a look at creating and managing virtual environments using Anaconda Navigator.

3. Installing and accessing Jupyter Notebook

In this walk-through, we take a look at installing and accessing Jupyter Notebook via Anaconda Navigator.

- Installing and accessing Jupyter Notebook [Walk-through]: <https://player.vimeo.com/video/865903056?h=0d489103dc>

4. Creating our first notebook

In this walk-through, we take a look at creating and running a Python Jupyter Notebook.
